

Gagan Yadav

Generalist | Software Engineer

Hisar, India | gaganyadav424266@gmail.com | +91 93706 76861 | Portfolio | GitHub | LinkedIn

PROFILE SUMMARY

Generalist and Software Engineer scoring frontier-model outputs through RLHF, prompt engineering, and multimodal annotation. Applies the same rigor to React.js, Python, and Node.js production apps and legacy C++ OMS systems, with clear written feedback in remote Slack and Teams workflows.

CORE COMPETENCIES & TECHNICAL SKILLS

- **AI Evaluation & Training:** Prompt Engineering, RLHF, Adversarial Prompting, Model Output Evaluation, Factuality & Plausibility Auditing, Hallucination Reduction, Critique Rework
- **Multimodal Annotation:** Audio-Visual Coherence Auditing, Grounded Captioning, Entity Tagging, Transcript Verification & Correction, Spatial Reasoning Checks
- **Collaboration Tools:** Slack (Channels, Huddles, Canvas, Bot Workflows), Microsoft Teams, Asynchronous Remote Workflows, Cross-functional Communication
- **Technical & Diagnostics:** Apple Hardware/Software Diagnostics (iOS/macOS), System Troubleshooting, Mac Engine Debugging, CRM & Ticketing Systems, Data Entry, System & UI Diagnostics
- **Annotation Tools:** Labelbox, Annotation Critic, PPSSPP/Emulators, Custom AI Evaluation Platforms
- **Software:** React.js, Next.js, Python, Node.js, C++, Linux, REST APIs, Git, GitHub Actions, Jenkins

WORK EXPERIENCE

Gray Marrow

New Delhi, India (Jan. 2025 – Jul. 2026)

Software Developer: React.js, Python, Node.js, GenAI

- Delivered low-latency trading dashboards in React.js and JavaScript on Linux, improving interaction speed by **35%** and peak-load responsiveness by **25%** during market spikes
- Engineered Python (Pandas, NumPy) market-data pipelines that resample tick streams into OHLCV candles (1s/1m/5m) for real-time charting and strategy indicators
- Refactored trader-facing React UI (HTML5, CSS3, JSX), cutting page-load time by **30%** and raising internal-tool engagement by **20%**
- Optimized C++ trading components on Linux with multithreading and memory tuning, reducing processing latency by up to **35%** in high-frequency paths
- Extended legacy C++ systems in the OMS with NSE equity and BSE FIX trading, NFeed L2 data, TBT ingest (core pinning, NIC/kernel tuning), TradingView HTTP orders, PreRMS, bulk square-off, and GitHub Actions CI/CD
- Evaluated GenAI copilot drafts for OMS docs with prompt engineering, RLHF-style ranking, and hallucination flags, cutting unsafe suggestions by **30%**

Turing

Remote (Freelance) (May 2026 – Present)

Multimodal Evaluation Specialist

- Labeled audio-visual clips for coherence, grounded captioning, and spatial-reasoning checks on custom AI evaluation platforms
- Verified and corrected transcripts against audio, reducing entity and timing errors by **35%** before training ingest
- Tagged entities and logged UI/system diagnostics in Slack/Teams async workflows with ticketing/CRM handoffs

Handshake AI

Remote (Freelance) (Mar. 2026 – Sep. 2026)

AI Evaluation Specialist

- Authored gold-standard software-engineering evaluation tasks (prompts, hidden tests, failure cases) so LLM coding agents could be scored consistently
- Calibrated oracle vs. no-op baselines and quality-control checks, raising pass/fail reliability of agent runs by **25%**
- Audited agent traces for factuality, instruction-following, and unsafe shortcuts, then reworked critiques until they matched the rubric

Outlier

Remote (Freelance) (Aug. 2025 – Aug. 2026)

LLM Trainer: RLHF, Prompt Engineering

- Ranked paired model outputs for RLHF preference data, applying factuality and plausibility audits that lifted rater agreement by **20%**
- Wrote adversarial prompts to surface hallucinations and instruction-following failures across STEM and finance prompts
- Reworked critiques on Labelbox and custom eval platforms so final labels met guideline bars on first QA pass

Solytics Partners

Pune, India (Apr. 2023 – Dec. 2024)

Full Stack Developer: React, Node.js, GenAI

- Modernized legacy frontend with React, Redux, and React Table, boosting performance by **40%** and cutting page load by **2 seconds**
- Shipped a production React.js + Node.js application that grew monthly active users by **50%** and reduced support tickets by **20%** within 6 months
- Designed Django REST APIs that cut server response time by **40%**; launched Material-UI/Formik/Yup flows that lowered bounce rate by **40%**
- Integrated Axios and React Router across complex forms and multi-page flows, improving navigation consistency and client-side error handling
- Added PostgreSQL-backed reporting with automated API tests, reducing production data issues and support follow-ups
- Prompted internal LLMs to draft QA notes on AML reports, then audited outputs for factuality before analyst handoff

EDUCATION

Army Institute of Technology, Pune (SPPU)

Bachelor of Engineering, CGPA: 7.9

- Coursework: Data Structures & Algorithms, Operating Systems, OOP, DBMS, Software Engineering

Pune, India

Jun. 2018 – Jun. 2022

PROJECTS

SentinelOps | Angular, FastAPI, MCP, SSE

- Architected a multi-agent incident pipeline (Angular, FastAPI, MCP, SSE) with human-in-the-loop remediation, improving AI action auditability by **40%**
- Enforced token/budget limits and durable run state on Cloudflare Pages, cutting unbounded agent-loop overruns and raising demo reliability by **50%**
- Shipped an Angular operator console with live SSE run updates so SREs can pause, approve, or reject agent actions in real time

Trading Engine Bridge | C++17, Postgres, TCP

- Developed a C++17 webhook bridge (libmicrohttpd, Postgres, binary TCP) mapping TradingView alerts to OMS orders, reducing middleware latency by **35%**
 - Implemented token-gated webhooks and NSE/BSE contract resolution with structured fill logging, improving routing correctness by **30%**
 - Persisted structured fills in Postgres for replay and ops debugging, improving post-trade auditability
-

ACHIEVEMENTS AND LEADERSHIP

- Recognised for gold-standard LLM evaluation tasks and critique rework that passed first-round QA with no Sev-1 label defects
- Led the Competitive Coding Cell that hosted 12+ workshops and hackathons annually, fostering a collaborative coding environment for 150+ students on campus
- Volleyball Secretary — Organised 10+ team events promoting collaboration and sportsmanship
